

Project Case Study

Project: PennWest Lease

Location: British Columbia, Canada

Application: Frac Water Tanks

System: 2 Contain Frac Water Tanks 1.3 million Gallons each.

Contain Water Systems Inc. specializes in Frac Water and Open Top Water Storage Tanks. Seen in this case study PennWest Oil Company is storing a combined total of 2.6 million gallons of water for frac operations. One tank is used for clean water before it goes in the hole and the other tank is used for frac water "dirty water" that is then treated and redistributed back into the hole. These frac water tanks save companies tens of thousands of dollars because of their functionality and ability to be reused and moved from site to site.

Pen West Lease, British Columbia Frac Water Tank

- Contain Frac Water Tanks / Open Top
- Durable 40-60 Mil Black EnviroLiner
- 12" Outlet Kit
- Inline Heating Systems
- Pumping and Discharge Systems
